

DAX Queries Reference Guide

Total Sales

Calculates the gross revenue generated across all transactions.

None

```
Total Sales = SUM(DataCo_Split[gross_sales_usd])
```

Total Net Profit

Calculates the total profit after all deductions and costs.

None

```
Total Net Profit = SUM(DataCo_Split[net_profit_usd])
```

Total Direct Loss

Aggregates all negative profit entries to identify the total financial loss from underperforming orders.

None

```
Total Direct Losses =  
CALCULATE(  
    SUM(DataCo_Split[net_profit_usd]),  
    DataCo_Split[net_profit_usd] < 0  
)
```

Profit Margin

Expresses the percentage of revenue that remains as profit, used for assessing operational efficiency.

None

```
Profit Margin % = DIVIDE([Total Net Profit], [Total Sales], 0)
```

On Time Delivery Rate %

Measures the proportion of orders delivered on schedule versus total order volume.

None

```
On Time Delivery Rate % =  
VAR TotalOrders = COUNT(DataCo_Split[order_id])  
VAR OnTimeOrders = CALCULATE(COUNT(DataCo_Split[order_id]),  
DataCo_Split[late_delivery_risk] = 0)  
RETURN DIVIDE(OnTimeOrders, TotalOrders, 0)
```

At Risk Revenue

Identifies potential revenue loss from orders that are canceled, pending, or flagged for fraud.

None

```
At Risk Revenue =  
CALCULATE(  
    SUM(DataCo_Split[gross_sales_usd]),  
    KEEPFILTERS(DataCo_Split[order_status] IN {"PENDING_PAYMENT",  
"CANCELED", "SUSPECTED_FRAUD"})  
)
```
